

A decorative graphic consisting of multiple concentric, curved arrows. The arrows are colored in shades of green and blue, with some having a 3D effect. They are arranged in a large, horizontal, oval-like shape, with some arrows pointing clockwise and others counter-clockwise, creating a sense of flow and movement around the central text.

➔ Virtual Desktops Leverage File Servers Effectively

VDI proximity to the data center also enables data isolation through file shares and profile management.

VDI Protocols

→ What is VNC?

- Virtual Network Computing (VNC)
- Remote control system of other computer windowing environments
- Allows access to “desktops” of like or different operating systems
Developed by AT&T Laboratories
- **Freely Available**

VDI Protocols

Why VNC?

- Freedom to choose your favorite computing environment
 - And still have access to the more powerful UNIX system
- Remote access is made possible to the major platforms
 - You want to work at home, but you forgot that one critical file at school on the...
- Reinforces the concepts of client/server software
 - Concept foreign to most PC/MAC users
- Price is right
 - Free

VDI Protocols

Quickstart use of VNC

Prerequisites

- You should be comfortable with the client/server concepts of the X-windows environment
- If not, review “Introduction to X windows”
 - ✓ <http://www.strath.ac.uk:80/CC/Courses/oldXC/xc.html>
- VNC server and viewer installed on both local and remote machines

VDI Protocols

Quickstart use of VNC

Configurations you will encounter

1. Local PC/MAC accessing remote UNIX system
2. Local UNIX system accessing remote PC/MAC
3. Local UNIX system accessing remote UNIX system

VDI Protocols

Installation of VNC Software

- Download site
 - <http://www.uk.research.att.com/vnc/download.html>
- CIS Unix platforms
 - Already installed by system administrator
- PC platform
 - Download and install as you would other PC software
- Mac platform
 - Download and install as you would other Mac software

VDI Protocols

→ VNC Software components

- VNC has two major software components

VDI Protocols

VNC SERVER

- Provides the “remote” half of the “remote control” system
- Communicates interactions from the remote machine to the local machine
- Exports the view of the remote “desktop” screen environment to a local machine
- Imports keyboard and mouse inputs from local machine to remote machine

VDI Protocols

VNCVIEWER

- Provides the “local” half of the “remote control” system
- Communicates interactions between local machine to the remote machine
- Imports the view of the remote “desktop” screen environment to the local machine
- Exports keyboard and mouse inputs from local machine to remote machine

VDI Protocols

→ Real VNC
