

A decorative graphic consisting of several concentric, curved arrows. The arrows are colored in shades of green and blue, with some having a 3D effect. They are arranged in a circular pattern, with some pointing clockwise and others counter-clockwise, creating a sense of flow and movement around the central text.

Introducing Remote Desktop Services

TS RemoteApp™
TS Gateway
TS Session Broker
TS Web Access
TS Easy Print
Terminal Server

RemoteApp™
RD Gateway
RD Connection Broker
RD Web Access
RD Easy Print
RD Session Host
RD Virtual Host
RemoteApp & Desktop Connections

VDI Protocols

Benefits - Remote Desktop Services

Accelerate Desktop and Application Deployment

- Install and maintain applications once in the datacenter, not on every desktop
- Enable flexible work scenarios such as hot-desking and work from home
- Deploy applications to devices that can't run them natively, or that require hardware upgrades to run them

VDI Protocols

Benefits - Remote Desktop Services

Help Secure Data and Applications

- Keep data safe in the datacenter to help eliminate the risk of laptop data theft
- Help simplify the burden of regulatory compliance with centralized tracking

Increase Remote Worker Efficiency

- Quickly connect remote workers with the critical applications they need from a Web page
- Provide users with secure access to remote applications from outside the corporate network (without using VPN infrastructure)

➔ Remote Desktop Session Host (RDSH)

VDI Protocols

→ App-V for RDS

DI Protocols

Remote Desktop Virtualization Host (RDVH)

VDI Protocols

RDS Roles Explained

Role	Function
RemoteApp	Publishes applications with just the application UI, and not a full desktop UI
RD Session Host	Hosts centralized, session-based applications and remote desktops
RD Virtualization Host	Hosts centralized, virtual-machine-based (virtual) desktops on top of Hyper-V for VDI environment
RD Connection Broker	Creates unified administrator experience for session-based and virtual-machine based remote desktops
RD Gateway	Allows connection from clients outside the firewall, using SSL, and proxies those to internal resources
RD Web Access / RemoteApp & Desktop Connections (Windows 7)	RD Web Access provides Web-based connection to resources published by RD Connection Broker. Supports traditional web page, as well as new RemoteApp & Desktop Connections
RD EasyPrint	Simplifies printing to a local printer, and supports legacy and new print drivers without the need to install those on the host

Comparison

Feature	Standard PC	PCoIP	RDP
Applications			
Independent	Yes	Yes	No
Session Support	Any	Any	Restricted
Performance			
Graphics and Media Rich Content	Full	Full	Poor
Minimal GPU Loading by Encoder	N/A	None	Varies
Minimal Compute Power	N/A	None	Varies
Frame Update Rate	60 Hz	60 Hz	Poor
Adaptation			
Bandwidth Saving Lossy Encoder	N/A	Yes	No
Variable Bit Rate Adaptive Encoder	N/A	Yes	No
Image Transfer	N/A	Yes	No
Device Support			
Device Support	Any	Any	Poor
Protocol	USB 2.0	USB 1.1	USB 2.0
Audio Support	HD 5.1	HD 5.1	Stereo
Video Audio	Yes	Yes	No
Security			
Device Authorization	No	Full	Limited
Operating System Exposure	Yes	No	Yes
Availability			
Multi Source Availability	Multi Source	Multi Source	Multi Source
Device Drivers	Yes	No	Yes
Integration and Collaboration			
Thin Client	N/A	No	Yes
Integration	N/A	Limited	Limited

Green: Feature is fully supported at the highest level of performance or functionality

Yellow: Feature is partially supported but some functionality or performance is limited

Red: Feature is not usable, very poor or not support at all

VDI Protocols

VMware VDI Solution Overview - Current

Integrated solution including:

VMware VI3 Enterprise
Virtual Center
Virtual Desktop Manager

DI Protocols

Unified Access

Support other platforms accessible by RDP

- Terminal Server
- Blade PCs
- Physical PCs

Increase in device support

Broader USB

Smart Card and CAC

Universal Printer

DI Protocols

Virtual Printing

Driver Free Printing: No Installation and Maintenance of printer drivers on Virtual Desktops

All necessary printers automatically available

Minimize network utilization up to 98% with advanced print stream compression

High quality printing even over WAN connections

Use of client printer driver rather than complicated server installations

VDI Protocols

Offline Desktop

Offline VDI

- End-users can check-in and check-out their virtual desktops
- Administrators can extend security policies to the local computer
- Near approximate of the full local experience

A decorative graphic featuring a series of concentric, curved arrows in green and blue, forming a large, stylized 'U' or 'C' shape. The arrows are layered, with some pointing inwards and others outwards, creating a sense of movement and flow. The background is a light gray with a subtle hexagonal pattern.
